Overview

ATTRACT Time Tracking tool is an Employee "Work-hour" tracking system from AAGAMA Computer Consultancy Services Pvt. Limited.

It is designed & developed with intent of Optimizing Human Resource segment with the concept of "Accountability & Ability" implemented in an interactive & recordable manner

Attract is an intra-organizational application that is flexible and adaptable enough to customize the specific needs of an enterprise in different business environment. It is designed to cover all utilities of employees in a hub and serve as an effective decision making tool for the upper management in hierarchy

Modules of ATTRACT

- Employee Management
 - Effective Work-hour Tracking
 - Performance Tracking
- Project Management
 - Client Base Maintenance
 - Tech-Base Maintenance
- Process Management
 - KPA Maintenance
 - Team/Department Monitoring

CASE STUDY – Attract

Problem Statement

If the CEO is "The Brain" of a System then the "Total Employee Segment" is the Heart of it. Tracking the performance of such a "heart of system" often goes into cold storage, considering two of the major issues behind it:

1. Highly Susceptible Nature of Employee segment with respect to exterior factors
2. Practical impossibility of the Senior most person in charge to physically reach, record, reward or replenish every employee

The Solution

ATTRACT is the answer for such a scenario, where the tracking of current status of each employee, in the terms of the projects volume, leaves granted and effective hours of work, etc can facilitate the upper management, a more clear data to understand the performance of each unit of HR and thereby the strengths and weakness of the work force as whole

Such a consolidated data can be comprehended flexibly from the range of "Performance Indicators" of the lower level to the "Annual Reporters" of the higher level of Business Hierarchy

Inherent Benefits

As obvious with its inherent behavior, there are more intrinsic segments in an organization, which are dependent on employee segment. ATTRACT ensures to address the key ones among them like tracking and maintaining the Information about Techno-base, the Client base and Knowledge Process Areas, in regard to the organization

The futuristic aspect of converting such a stand-by application to a standard Framework, that be overridden according to an enterprise's requirement, can drive-up its utility factor

About AAGAMA

Aagama was founded by IT professionals with more than 15 years of experience with intent to create an environment that would attract the most experienced and best skilled people to provide high quality IT services to our customers. Our founding team members come from diverse backgrounds with a depth of skill and experience. Our extensive project management experience allows us to do complete turn-key solutions for our customers.

Aagama has significant expertise in partnering with companies to plan, build and integrate the processes and systems to extend their relationships via the web. Aagama works with you to develop and implement solutions that will reduce costs, enhance revenues, streamline processes, increase your customer base and create new marketing opportunities. Our offerings span business strategy, technology integration, application development and creative design to build electronic commerce solutions, extranets, intranets, and portals.
